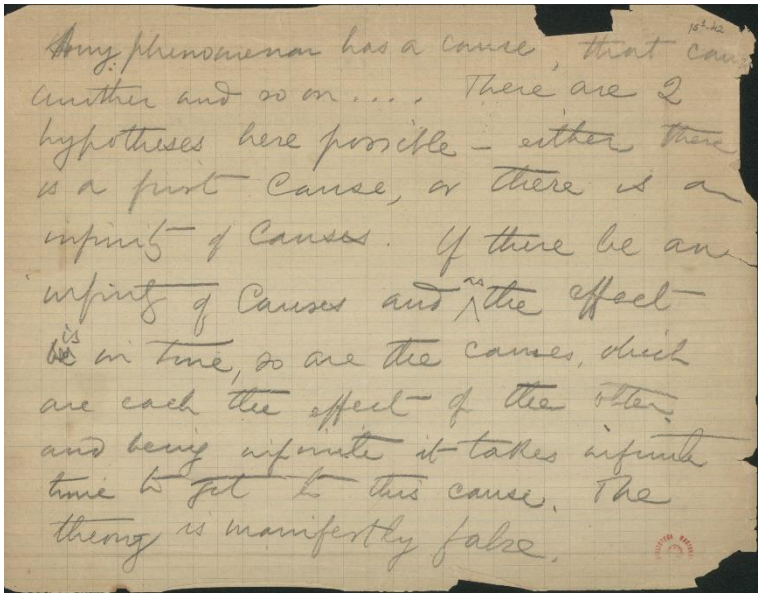
BNP/E3, 15[1] – 42[r]



Transcrição

Any phenomenon has a cause, that cause another and so on… There are 2 hypotheses here possible — either there is a first cause, or there is an infinity of causes. If there be an infinity of causes and as the effect ~~be~~ is in time, so are the causes, which are each the effect of the other and being infinite it takes infinite time to get this cause. The theory is manifestly false.
